

4 33-1-2

SYNOPSIS

OF

PHARMACOLOGY,

IN WHICH THE REMEDIAL AGENTS, OBTAINED FROM THE THREE KINGDOMS OF NATURE, ARE ARRANGED ACCORDING TO CLEAVELAND ON MINERALOGY, TO JUSSIEU ON BOTANY,

AND TO CUVIER ON ZOOLOGY, DESIGNED FOR THE USE OF THE MEMBERS OF THE VERMONT ACADEMY OF MEDICINE, AND ALSO, AS A MANUAL FOR THE PRACTITIONER OF MEDICINE.

BY

J. A. ALLEN, M. D.

PROFESSOR OF BOTANY, MATERIA MEDICA, AND PHARMACY IN THE VER-MONT ACADEMY OF MEDICINE; LECTURER ON CHEMISTRY IN MID-DLEBURY COLLEGE; MEMBER OF THE AMERICAN GEOLOGICAL SOCIETY; AND CORRESPINDING MEMBER OF THE NEW-ENGLAND LINNEAN SOCIETY, &C.

MIDDLEBURY:
PRINTED BY J. W. COPELAND.
1623.

GV A427s 1823

DISTRICT OF VERMONT, to wit :

(L. S.) BE IT REMEMBERED, That on the twenty-eighth day of August, in the forty eighth year of the Independence of the United States of America, JONATHAN A. ALLEN, of the said District, hath deposited in this office, the title of a book, the right whereof he claims as Author, in the words following, to wit: "A Synopsis of Pharmacology. In which the remedial agents, obtained from the three kingdoms of nature, are arranged according to Cleaveland on Mineralogy; to Jussieu on Botany; and to Cuvier on Zoology: designed for the use of the members of the Vermont Academy of Medicine; and, also, as a Manual for the Practitioner of Medicine. By Jonathan A. Allen, M. D. Professor of Botany, Materia Medica, and Pharmacy, in the Vermont Academy of Medicine; Lecturer on Chemistry in Middlebury College; Member of the American Geological Society; and Corresponding Member of the New-England Linnean Society, &c." In conformity to the act of the Congress of the United States, entitled "An act for the encouragement of learning, by secu ing the copies of maps, charts, and books. to the authors and proprietors of such copies, during the times therein mentioned."

JESSE GOVE,

Clerk of the District of Vermont.

A true copy of record, examined and sealed by me.

J. GOVE, Clerk.

ADVERTISEMENT.

THE science of Pharmacology regards the Physical, Chemical and Remedial properties of Medicine; the Mineral, Vegetable, and Animal substances, from which they are procured; the best forms which can be given to them in order to adapt them for administration, and the nature of the actions they excite in the living system.

Pharmaeology, therefore, affords a more extensive field of inquiry, and claims a more lofty character than *Materia Medica*, which presupposes a knowledge of the natural character of medicines, and is more properly confined to discussions on their operations, and the morbid affections in which they may be advantageously employed.

It is to be regretted that this science, so important in the completion of a medical education, should have been so generally neglected. Of what utility are theories the best conceived, and practical precepts of demonstrated correctness, without efficient medicinal remedies and preparations to carry them into operation? Of what avail is a thorough knowledge of diseases without an understanding of the agents necessary to relieve them? A knowledge then, of pharmacology, is as indispensable and important to the practitioner as that of any other department of medical science.

The object of the present work is to afford a short and comprehensive system in which the natural characters, chemical properties, medicinal virtues, officinal preparations, and doses of each article of medicine, and also, its incompatible substances, may be seen at one view.

In all cases each article of medicine is placed in the system where its physical character, or most essential constituent or base seemed to fix it. Thus Nitrate of Potash is placed under the Genus Potash, and as Nitric Acid does not exist in a native state, but is obtained from the decomposition of Nitre, this acid is placed under Nitrate of Potash.

The advantages to be derived from this natural classification will readily be perceived by the Naturalist. To those who have not devoted attention to the physical sciences its benefits will not appear so obvious. It may therefore, be remarked, as a general rule, that similarity or resemblance appears to extend through Nature. Objects which resemble each other in external forms are also usually assimilated in internal qualities, and operative powers. A certain general agreement of this kind evidently prevails. It is, however, so varied and subject to so many exceptions, that it is difficult to establish this resemblance by general scientifick descriptions. It is as easy perhaps to learn the properties of objects from their external habit as to understand the characters of mankind from their physiognomy—more certain and conclusive than opinions respecting the intellectual faculties drawn from bumps and prominences on the head.

There are but few exceptions to the general rule that substances of the same genus have analogous properties. This is illustrated in the genus Iron, Mercury, Antimony, Solanum, Gentiana, &c. The principle difference of the medicinal virtues in the specifick articles of each genus, appears, in most instances, to be in degree.

In Mineralogical associations, the analogy of properties or operative powers, it is believed, is limited by the genus, but in botanical, the resemblance is more extensive. Among the botanical systems, that of Jussieu, founded on the Cotyledons, and other essential characters, appears to associate vegetables possessing similar properties in a good degree. In some of his orders the resemblance is truly astonishing—This is evinced in the 29th Order, LABIA_TAE, and, also, in the 41st. SOLANEAE. In some orders exceptions will be found. The medical properties of Jussieu's orders in this work, are mostly taken verbatim from Professor Eaton's translation including his remarks drawn from Parkinson and others. In some few instances I have ventured to vary the character where facts would warrant me so to do.

Much pains have been taken to introduce all our important indigencous vegetables.—To accomplish this object and to render the treatise as correct as possible, reference has been had to Professor J. Bigelow's valuable Medical Botany, to Barton's Vegetable Materia Medica of the United States, to Woodville's elaborate Medical Botany, to Rees' Cyclopedia, the Edinburgh Encyclopedia, Paris's

Pharmacologia, Sequel to the American Pharmacopeia, to most of the Periodical Works of the day, &c. Great assistance has also been derived from the use of Professor Eaton's Manual of Botany, and Nuttall's Genera of North American Plants, especially in fixing the localities, &c. An acknowledgement is also due to Professor Eaton, and to the Rev. Edward Hitchcock, A. M. of Conway, Mass. for valuable hints.

An apology is due to the Publick for the numerous Typographical errors. These were unavoidable from the circumstances in which the Author was placed—being prevented by pressure of other business from correcting the proof sheets, and unable even to review the first draught of some of the pages. The errors of consequence are noticed in the Errata. The others are of no practical moment. The articles omitted in the body of the work, have been added in the Appendix—together with a Toxicological Table, which it was thought would be of use to the Practitioner of Medicine on sudded emergencies. In the construction of this table, besides Orfila's experiments, reference has been had to Dr. Beck's new and learned work on Medical Jurisprudence.

To diminish the expence, and to render the work more portable, and better to answer the purpose of a *Manual*, much matter has been published by abbreviations which are explained on the 6th and 7th pages. Blank leaves are introduced into some of the copies for the purpose of inserting Recipes or other Notes.

As it is, the Author presents it to the Publick, not regardless of the reception it may meet, but with a humble hope, that its fate may in some measure be commensurate with the anxiety and labour bestowed in bringing together, in a new form of arrangement, a scattered mass of materials.

THE AUTHOR.

Middlebury, November 16, 1823.

Abbreviations used in this work.

A. Alterative.

Anth. Anthelmintick.

Ant. Antispasmodick.

Ants. Antiseptick.

Eps. Epispastick.

Esch. Escharotick.

Ex. Expectorant.

F. Flower.

Inc. Incompatible Substances.

L. Laxative.

Lea. Leaves.

Lith. Lithontriptick.

N. Narcotick.

R. Root.

Ref. Refrigerant.

Rub, Rubefacient.

Sd. Seed.

Stim. Stimulant.

T. Tonick.

LOCALITIES OF PLANTS.

A. Albany.

B. Brattleborough.

C. Columbia College.

D. Deerfield, Mass.

Ex. Exotick.

H. Highlands.

M. Middlebury College.

O. Every part of the country.

S. Southern States.

W. Williams College.

Y. Yale College.

Note. Each letter denotes that the plant grows at the place mentioned or in the vicinity.

Figures added to a Genus denote the artificial class and order of the System of Linnæus to which the genus belongs, thus, 10. 1. denotes the class, Decandria, order, Monogynia.

Ap. April.—M. May.—J. June.—Ju. July.—Au. August.—S. September.—Oc. October. Any of these abbreviations prefixed to a species, shows that its time of flowering is about that season of the year.

WEIGHTS AND MEASURES.

To express the quantity of solid bodies, we employ what is call-Troy weight.

The pound, lb.
The ounce
The drachm,
The scruple,

The pound, lb.

Contains

Twelve ounces, denoted by 3

Eight drachms, 3

Three scruples, 9

Twenty grains, gr.

To express the quantity of liquids, measures derived from the wine gallon are employed

The gallon, Cong.
The pint,
The fluid ounce,
The fluid drachm,

The fluid drachm,

The fluid drachm,

a. a. Denotes equal quantities.

ss. One half.

gtt. Drop.

CLASS 1.

Subtances not metallic, composed entirely, or in part of an Acid.

ORDER 1.

Acids not combined.

GENUS 1.

Species. 1. Sulphuric Acid-Oil of Vitriol,-Dilu-

ted, Aromatic—T. Ref. Ast.

PART SECOND.

Vegetables from which medicinal articles are obtained, arranged according to the natural method of the illustrious Anthony Lawrence de Jussieu.

This philosopher contends for three great and principal divisions among plants, founded on the form of their embryo. These divisions are subdivided into classes, orders, genera and species, which are formed from some essential characters of the vegetable.

FIRST DIVISION.

ACOTYLEDONS

or plants whose seeds are destitute of lobes. This division contains only one class. Cradstoob.

ORDER 1. FUNGI.

Generic Name. Boletus. 22-6.

Specific name.

O.-1. Igniarius.

M. (Canada,) 2. Annulatus? T. Bitter. PROPERTIES. Tonicks if dry and corky; catharticks and narcoticks, if juicy.

ORDER 2. ALGEA.

Lea Buck

G. N. Cetraria. 22-5. C, Y,-1. Islandica. Iceland Moss. 2. Caninus.

G. N. Cenomyce. 22-5.

Rangiferina .--- Rein-Deer moss

Prop. Tonicks; some contain useful coloring mata ter, and some are nutritive,

ORDER 3. HEPATICAE.

ORDER 4. MUSCI. profo-ORDER 5. FELICES. frutfur

G. N. Polypodium. 22—1.

O. 1. Vulgare -- poly pod--R.--Ast.--Dem. 2. Felix Mas.—Male poly pody.

Scolopendrium.

(M. Onondaga. Ju.) Officinarum.—catterpiller fern.—Mild Ast

Adjantum.

O. J. — pédatum—maiden hair.

Osmunda. 22—1.

O. J. Regalis.—Flowering fern—R. Dem. Ast.

Lycopodium. 22-1.

O. Ju — — clavatum.—club moss.

Cycas.

(East-Indies.) Circinalis-Sago-Forms a nutritious jelly

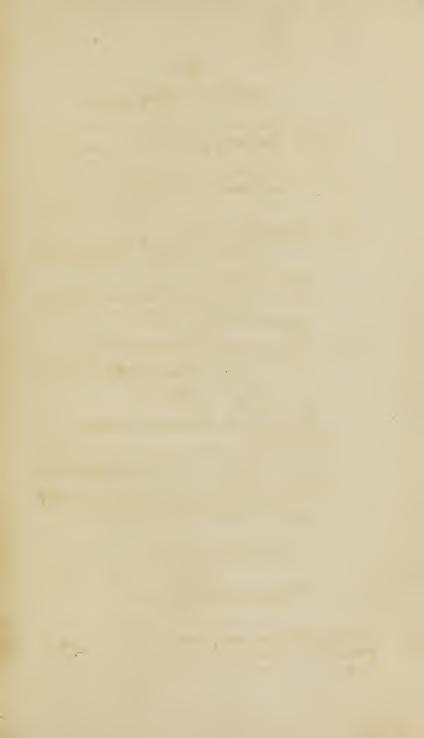

Pteris. 22—1.

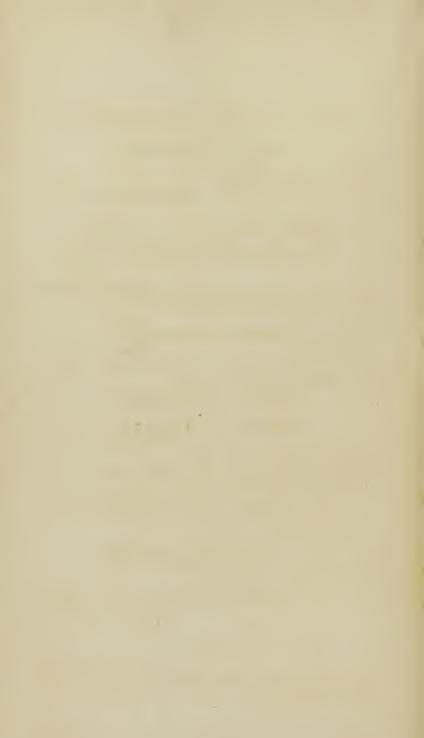

O. Ju. Aqulina—common brake—R. Dem PROP. Mild stimulants and demulcents.

SECOND DIVISION...

MONOCOTYLEDONS.

or plants with one lobed seeds. This division embraces three classes.

CLASS 1. STAMENS. HYPOGYNOUS.*

ORDER 7. AROIDEAE.

G. N. Ictodes. 4—6. †O. — Foetidus.—Skunk cabbage—R. Ant. grs. x. to xx.

Arum. 20—13.

O. — 1. Triphyllum.—Indian turnip. (Europe.) 2. Maculatum.—Wake-robin—gr. x. to 9i.

Prop. The nauceous are antispasmodicks: the warming, stomachicks.

ORDER 8. TYPHAE.

G. N. Typha. 20—3.
O. Latifolia.—Cat-tail.
ORDER 9. CYPEROIDEAE.

ORDER 10. GRAMINEAE.

G. N. Saccharum. 3—2.
(West Indies,)—Officinarum.—Sugar cane.
Hordeum. 3—2.
Ex.—Vulgare.—Barley—Pearl-barley—nu-

tricious Dem.

Triticum. 3-2.

Ex. 1. Hybernum.—Winter wheat.

Ex. 2. Aestivum.—Summer wheat.

Secale. 3-2.

Ex.—Cereale.—Rye—Secale Cornutum, Ergot—gr x. to 3i.

Avena. 3---2. Ex —Sativa.—Oats.

^{*} STAMERS HYPOGYNOUS—Denotes that the stamens are inserted under the germ; Perigynous, that the stamens are inserted around the pistil, Epigynous that the stamens are inserted on the pistil.

† Rarely found in Vermont.

Zea.—20—3.

O.—Mays—Indian corn.

Oryza. 6-2.

(Europe.)—Sativa.—Ricc

Prop. Feeble tonicks, and the largest seeds are used for diet.

CLASS 2. STAMENS PERIGYNOUS.

ORDER 11. PALMAE.

G. N. Calamus. 6—1.

(E. Indies.)—Rotang.—Rotang cane---Ast.

Cocos.

(S. America.)—Botyracea. The Mackane tree. Palm oil.

Prop. Mild Tonicks.

ORDER 12. ASPARAGI.

G. N. Asparagus. 6—1. Sativa.

Convallaria. 6—1.

O .- Polygonatum -- Solomon seal.

Smilax. 21—6.

M. C. S. J. 1. Sarsaparilla.—Smilax.

2. China. -- Chinese Smilax.

Trillium. 6—3.

O. M.—Erectum.—False-wake robin.--R.

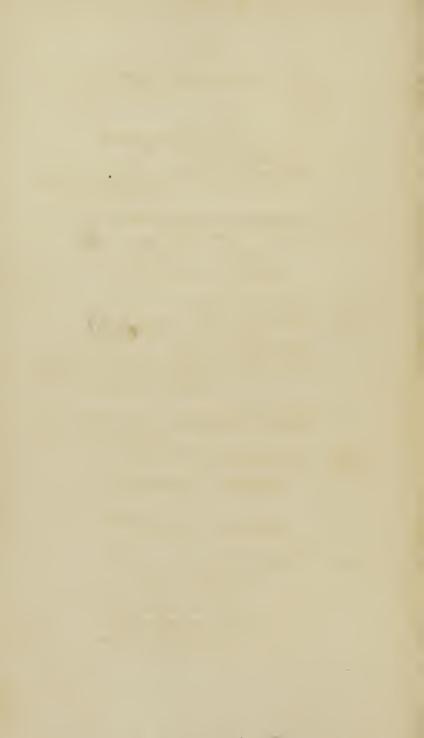

Ast.—Di. to 3i,

PROP. Mild Tonicks and stimulants.

ORDER 13. JUNCI.

G. N. Acorus. 6—1.
O. G. Calamus.—Sweet flag.—Aromatic.
Veratrum. 6—3.

U. Dhen matine, G. Viride. - White hellebore - R. -- S. E. fact. Face Mercie C. N. -- gr. i. toxx.

Alisma. 6--13.

O. Ju.--Plantago.--Water-plantain.

Colchicum. 6-3.

(Europe.) Autumnale. - Meadow saffron -

Eau Medicinale -S. Diu. -3i. to 3ii.

Prop. Stimulants; the sweet scented are warm stomachicks.

ORDER 14. LILIACEAE.

G. N. Lilium. 16-14.

Candidum --- White lily.

Erythronium. 6—1

O.M. Americanum—Dog-tooth-Violet— R---E--about gr. xx of the

green, xl. of the dry.

Aloe. 6---1.

(Africa.) Perfoliata----Aloes----Gum-resin ---C· Anth--gr. v. to x.

Prop. Emmolients, and weak stimulants.

ORDER 15. BROMELIAE.

ORDER 16. ASPHODELI.

·G. N. Allium. 6--1.

1. Porrum.—Leek.

2. Sativum.—Garlic.

M. M.—3. Trifolum---Mountain-leek.

4. Cepa --- Garden onion.

5. Schoenoprasum.---Cives.

Scilla. 6--1.

(Spain.)—Maratima.—Squill—R—E. Ex. Diu—Inc. Alkalies?—gr. i. to iv.

Aletris. 6---1.
Y. Forinosa.—False aloe.---R.---T.--Ast. Mild C.

PROP. Expertorants and demulcents.

ORDER 17. NARCISSI.

ORDER 18. IRIDES.

Iris 3--.1 O. J.---Versicolor--Blue-Flag--R.---C. Diu---gr. i to xv.

Crocus. 3---1.

Ex. 1. Sativus.--Saffron.

2. Anglicus---English Saffron.

Prop. Tonicks and stimulants.

CLASS 3. STAMENS EPIGYNOUS

ORDER 19. MUSAE.

ORDER 20. CANNAE.

G. N. Amomum. 1---1.

1 Zingiber---Ginger.---R.---S.

2 Repens---Officinal cardamom.

Curcuma. 1---1.

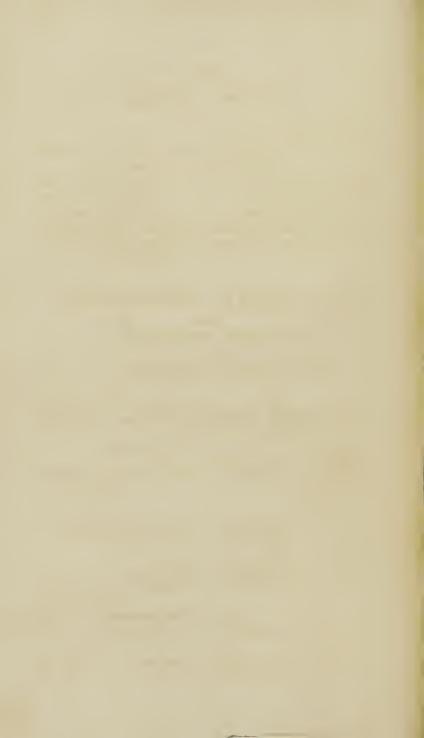

(E. Indies.) Longa---Long-rooted turmeric --- R.--- T.

Kaempferia. 1---1.

(India). Rotunda---Zedoary.

Prop. Pungent stimulants.

ORDER 21. OCHIDEA.

G. N. Orchis. 19 -- 1.

1. Maculata---Male Orchis--Salep---R.

2, Fimbriata?---Fringed orchis.

Prop. Emmolients, and the roots of some are stomachicks. Dioscorides, Galen and Pliny, speak of the roots as affording an excellent farinaceous diet; and also, of their great use in discussing swellings and cleansing ulcers.

ORDER 22. HYDROCHARIDES,

THIRD DIVISION.

DICOTYLEDONS.

or plants whose seeds have two lobes. This division is divided into eleven classes.

CLASS 1. FLOWERS APETALOUS. Stamens Epigynous.

ORDER 23. ARISTOLOCHEAE.

G, N. Aristolochiae. 13---6.
(Europe.) 1. Longa---long-rooted birth wort.---Mild T.

S. S. — 2. Serpentaria---Virginian Snake root---R--

T. Ants. D.

Thymus. 14--1.
Ex. Vulgaris--Thyme.
M. Ju. Scrpyllum.-Mother of thyme.

marjoram.

Prop. There appears to be a striking similarity in the properties of the plants embraced inthis order. In general, they are warm aromatic stimulants. The bitter plants are tonicks. Ancient pysicians placed much dependance on the vegitables bolonging to this order. To the virtues ascribed to them, by the moderns, they added that they are efficient as vermifuges, and in the cure of epilepsy, hemorhagy, bites of serpents and stings of scorpions.

The opinion, however, that any of them are sufficiently powerful to cure hydrophobia is of modern origin. And were we to judge from the general character of this order we should infer that the scutellaria lateriflera possessing the least sensible properties of any, was insufficient to accom-

plish that object.

ORDER 40. SCROPHULARIA.

G. N. Gratiola. 10-1.

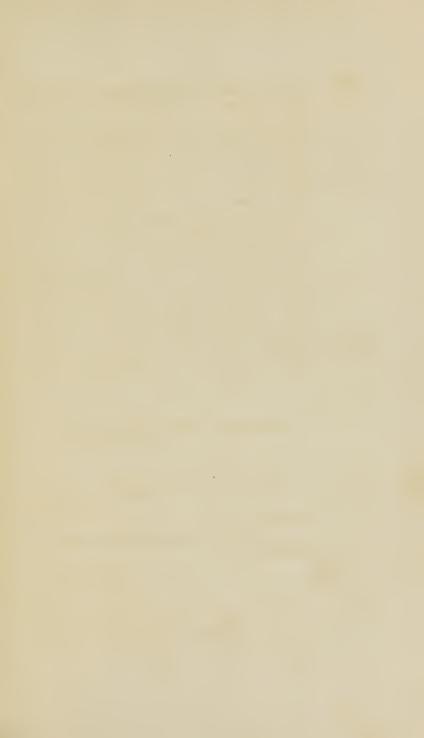

O. Ju. Aurea vel officinalis---Hedge hyssop. C.

Digitalis. 14--2.

Ex. Ju. Purpurea---Fox glove---N. Sabbatia. 5---1.

S. Au. Angularis--American Centaury--T. Bitter.

Prop. Narcoticks. Ancient physicians applied them to wounds. Parkinson used the degitalis in epilepsy two centuries ago with great success.

> resin. Frankincense of the an-

cients.

Taxus. 22--16.

Prop. Stimulants and expectorants. The resinous juice obtained from these plants has been applied as a remedy to wounds and old ulcers for more than two thousand years. Various preparations, as tar water, decoctions of the bark, &c. have been used with various success from the time of Dioscorides, and probably much earlier, in pulmonary complaints.

PART THIRD.

List of animals which furnish articles of the Materia Medica arranged according to Cuvier's system.

CLASS MAMMALIA.

Includes those animals which are viviparous and nourish their young with milk from the breasts.

ORDER RODENTIA.

G. N. Castor.

Fiber—Beaver—Castor—Ant—grs. x. to xx.

ORDER PACHYDERMATA.

G. N. Sus. Scrofa—The hog.

ORDER RUMINANTIA.

G. N. Moschus.

Moschiferus—Musk deer — Musk---Ant--grs. iii. to xx.

Cervis.

Elephus—Stag—Horns used in preparing James powder.

Ovis.

Aries-Sheep-Mutton suet.

Bos.

Taurus—The ox.

ORDER CETACEA.

G. N. Physeter.

Macrocephalus—Spermaceti whale —Spermaceti.

CLAAS AVES.

Oviparous having two wings and two feet.

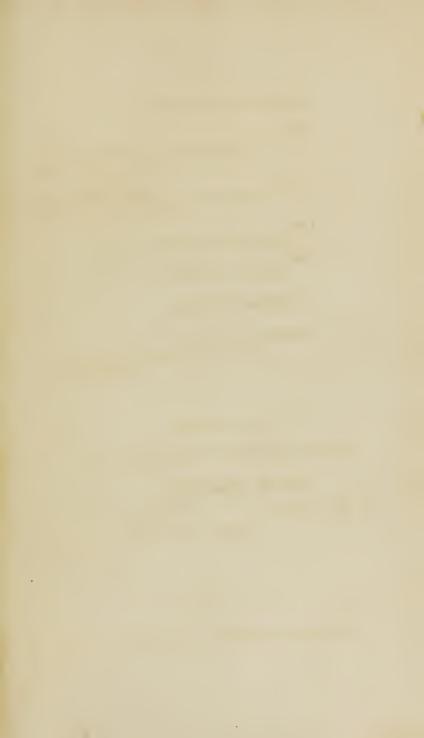

ORDER GALLINAE.

G. N. Phasianus.

Gallus—The dunghill fowl—Egg and flesh.

CLASS PICES.

Oviparous having fins, heart, and one ventricle.

ORDER CHONDROPTERGYGII.

G. N. Acipenser.

Sturio - Carier sturgeon -- Isinglass.

CLASS MOLLUSCA.

Bodies soft, without internal skeleton, external crust or jointed limbs, covering a soft skin without rings sometimes defended by stony plates.

ORDER CEPHALOPODIA.

ORDER ACEPHALA.

G. N. Ostrea.

Edulis—Oyster.

CLASS ANNELIDA.

Without a bony skeleton and having red blood-Body soft, elongated; covering divided into numerous transverse rings.

ORDER ABRANCHIA.

G. N. Hirudo.

Medicinalis -Leech.

CLASS CRUSTACEA.

Animals with jointed limbs.

ORDER DECAPODIA.

G. N. Cancer

1. Pagurus.

1. Astacus—Crawfish—Crab's eyes.

CLASS INSECTA.

Animals with jointed limbs and antennae.

ORDER COLEOPTERA.

G. N. Lyttae.

- 1. Vesicatoria—Spanish fly—S.
- 2. Trianthema.
- 3. Otrata-Solidago fly.
- 4. Cinerea.
- 5. Marginata.
- 6. Vittata—Potatoe fly.

Meloe.

Proscarabeaus.

ORDER HYMENOPTERA.

G. N. Apis.

Mellifica-Honey bee-Honey and wax.

ORDER HEMIPTERA.

G. N. Coccus.

Cacti-Cochineal.

CLASS POLYPI.

Small gelatinous animals with mouths surrounded by tentacula; which embraces that tribe of animals often called marine plants.

ORDER NUDATA.

haked, for

A TAXICOLOGICAL TABLE.

In which are exhibited at one view the antidotes to the most common poisons, or substances which in an over dose destroy life.

ANTIDOTES.
Calcined Magnesia, (Suspended in water,) Chalk, Hard soap, (Dem. Em.)
Vinegar, Lemon juice, (Mucilaginous drinks.)
(Excite vomiting,) (Mucilaginous drinks.)
Common Salt, (diesolved in water,) (Em. Dem,)
White of Eggs, Flour (in large quantity,) (Dem.)
No antidote, (Milk and water,) White of Eggs.
Glauber's Salt, Epsom Salt, (Dilunents;)
No antidote, (Sulphate of Copper or Zinc to excite vomiting,) (Large draughts of Sugared (water,)
Astringent decoctions of Vegeta- bles, such as oak bark, galls, &c. Tea Acetate of Morphia, Opium.

To relieve the effects of vegetable poisons, if vomiting have not taken place it should be excited by the use of Sulphate of Zinc or Copper, aided by large draughts of water or gruel—followed by Catharticks—Sometimes Ether or other stimulants are to be used.

Coffee rapidly lessens the effects of opium. Vinegar and other acids accelerate and aggravate its action. They combine with the Morphia and produce active Narcotic Salts.

ERRATA.
